

航空大学校 2009 年実施 学力試験

英 語

リーディング・テスト(70 分) リスニング・テスト(約 20 分)

リーディング・テスト (I ~ III)

I 次の () に入る最も適当な語句を、A ~ D から選び記号で答えよ。(1 問 2 点)

1. The proof of the pudding is in the ().

A : buying B : eating C : swallowing D : seeing

2. Sunjet Airways expects its profits for April to September to be 70 billion yen lower than ().

A : predict B : predicts C : predicting D : predicted

3. Mr. Matsuzawa decided to wait at the station until his wife ().

A : comes B : came C : will come D : has come

4. His report, () in haste, has many misprints.

A : printing B : having printed C : have printed D : having been printed

5. He is () to her in intelligence.

A : better B : inferior C : more D : worse

6. The members of the board are usually stockholders, chosen by () stockholders to operate the company.

A : another B : the another C : other D : one another

7. One of the () always sat in front of the main building.

A : guard B : guardmen C : security guards D : watchman

8. There will be one 20-minute intermission () the performance.

A : for B : during C : of D : until

9. Thank you for calling. We are () a high volume of calls. Please call us back later.

A : annoyed

B : connecting

C : experiencing

D : striving

10. He phoned everybody before the meeting () be sure of a quorum.

A : in order

B : in order that

C : so as to

D : so that

II 次の各文章の () に入る最も適切な語句を、A～Dから選び記号で答えよ。(1問2点)

There are many American expressions about insects —like bees, for example. Bees are known as very hard workers. They always appear to be (1), moving around their homes, or hives. So you might say you were as (1) as a bee if you spent your weekend cleaning your house. In fact, you might say your house was a beehive of activity if your whole family was helping you clean. You also might say you made a (2) for something if you went there right away. When we go to see a movie, my friend always makes a (2) for the place where they sell popcorn.

(1) A : busy

B : clean

C : pure

D : vicious

(2) A : beekeeper

B : beeline

C : honey

D : hornet

Top officials from the United States and China held two days of trade talks this week in Washington. They agreed to increase the number of direct flights between the United States and China. And Treasury Secretary Henry Paulson and Chinese Vice Premier Wu Yi said the talks cleared the way (3) other progress. But no progress was reported on the issue of the trade deficit.

It was the second in a series of talks, the U.S. — China Strategic Economic Dialogue. The next meeting is later this year in Beijing. Vice Premier Wu says talks are better than threats of what she calls “irresponsible” protectionist measures against China. Some American lawmakers says China is talking too long to (4) the value of the yuan. They say China unfairly keeps its (5) weak. They say this fuels the deficit by pushing down the cost of its exports and raising the price of American-made imports.

- (3) A : in B : for C : of D : to
- (4) A : raise B : raising C : rise D : risen
- (5) A : currency B : diplomatic C : defense D : communication

Global warming's most prominent mascot is the subject of another political fight. Following a ruling earlier this month by a California federal judge, the U.S. Fish and Wildlife Service has to decide by May 15 (6) the polar bear is an endangered species. An affirmative decision would make it the first mammal to face (7) from climate change.

- (6) A : what B : when C : whenever D : whether
- (7) A : drought B : extinction C : multiplication D : prosperity

Usually we think about material qualities when we think about the pleasure we will get from a product. When something costs a lot, we might think about all the fine work that went into it. But can price alone influence the pleasure we experience?

Hilke Plassmann, John O'Doherty and Antonio Rangel at Caltech and Baba Shiv at Stanford did a study. They had twenty people taste different wines. Wine was chosen because it comes in many different qualities and prices, and because a lot of people enjoy (8) it.

The people were told they were tasting five different Cabernet Sauvignons. The wines were identified only by price: five, ten, thirty-five, forty-five and ninety dollars. But in truth there were only three different wines, and two of them were presented twice, at a high price and a low price. For example, the wine that in fact cost ninety dollars a bottle was presented half the time as a ten dollar wine. There were two important results from the study.

First, the individuals, on average, reported greater pleasure from drinking wine that they were told was (9) in price. Brain images taken while the people tasted the wine supported this finding. Activity, represented by blood-oxygen levels, increased in an area of the brain thought to process "experienced pleasantness." Experiments have shown that the medial orbitofrontal cortex processes the experience of enjoyment from smells, taste and music. The new finding will add to the limited knowledge of how marketing affects brain activity.

The second result has meaning for economists and marketers. The experiment appears to confirm that raising the price can increase how much a product is enjoyed. In other words, when (10) comes to expectations, it seems you really do get what you pay for.

(8) A : has tasted B : taste C : tasted D : tasting

(9) A : higher B : highest C : cheaper D : lower

(10) A : it B : that C : these D : there

Ⅲ 次の文章を読んで以下の設問に答えよ。

Watching someone carefully rinsing out a spent mustard packet doesn't sound like entertainment, but in Japan it's big-time television. On a recent segment of Tokyo's popular morning show *Hanamaru Market*, a waste - recycling expert submerged a flimsy plastic packet in a tub of water, gently allowing water in and out to rinse it clean. A host of the segment stood by, watching intently, and asked if it was necessary to use soap. No, said the expert, water and a little elbow grease are all it requires.

That may sound obsessive, but sorting trash, Japanese-style, has become a rite of passage for responsible Tokyo citizenry. Gaggles of housewives think that being environmentally conscious is a trendy way to care for their families. Once Japanese people embrace an idea, they do so wholeheartedly(1). Environmental consciousness is no exception. Over the past 34 years, Japan has renewed a 25-yen (\$0.25) per liter gasoline tax—anathema in the U.S.—four times.

As an island nation with few natural resources, Japan can't afford to be profligate. That means it has something to teach other nations(2). The country is one of the most energy-efficient industrial countries in the world, and some of Japan's leading companies, such as Toyota and Sharp, are known for technologies that foster greener lifestyles. A conservation mind-set is ingrained into Japanese people from birth, and is apparent in little ways throughout society. Ten years ago, when I first visited Kyoto, I was shocked that public restrooms had no soap, no dispenser full of paper towels — sometimes no toilet paper. In their purses, *yamato nadeshiko* (woman who are, among other things, mindful and prepared) make a point to carry packets of tissue paper with them into the stall, and handkerchiefs to dry their hands. What other country would install devices to mimic the sound of a toilet flushing to discourage the waste of water by modest Japanese anxious to cover the sound of their micturition with multiple flushes(3)?

Japan is not without sin. Indeed, when it was industrializing in the last century, Japan was as famous for environmental catastrophes as for conservation(4). Minamata disease, the consequence of an industrial mercury discharge, caused muscular and neurological damage for thousands of Japanese; dioxin pollution has only recently been addressed. In that 1960s, Tokyo's air had the sort of reputation that Beijing's does today. Japan's household carbon dioxide emissions have increased an estimated 40% since 1990. A visit to any department store is to bear witness to an excess of wrapping and packing.

But the attitude of the public and the efforts of the government are slowly changing Japan. Partly, that is because of the concept of *mottainai*, which literally means “what a waste” and is

manifest in an almost reflexive desire to conserve and reuse. Centuries before there was an environmental movement, the Japanese embraced origami, an art form — originally from China — based on the notion of creation without cutting. Fashion designer Issey Miyake adapted the concept 30 years ago in apparel made with a single piece of cloth, cut so that no pieces wind up in the garbage.

“*Mottainai* is not an economical concept,” says Hiroyuki Torigoe, sociology professor at Waseda University in Tokyo. “It’s a mentality.” When Japan was a developing country enamored of American consumption and consumerism, Japanese people thought *mottainai* was outmoded(5), says Yukiko Kada, a former professor of environmental sociology who today is governor of Shiga prefecture. Now, Japanese people are rediscovering a desire to seek “spiritual and mental satisfaction” because their basic material needs are largely fulfilled(6), she says “The environment has drastically changed,” says Kada. “Twenty or 30 years ago there were many fish in lakes and rivers. But that has changed drastically and Japanese have started to think, “Where have my fireflies gone?” With luck and some *mottaimai*, they’ll soon be back.

1. 下線部(1)を日本語に訳せ。(11点)

2. 下線部(2)を日本語に訳せ。(7点)

3. 下線部(3)を日本語に訳せ。(8点)

4. 下線部(4)を日本語に訳せ。(4点)

5. 下線部(5)を日本語に訳せ。(5点)

6. 下線部(6)を日本語に訳せ。(5点)
