

航空大学校 2019 年実施 学力試験

英 語

リーディング・テスト(70 分) リスニング・テスト(約 20 分)

リーディング・テスト (I ~ III)

I 次の () に入る最も適当な語句を、1~4 から選び記号で答えよ。 (1 問 2 点)

問 1. What did you () yesterday?

- 1: eats 2: eat 3: ate 4: eaten

問 2. Everyone, please look at the world () on page 21. Where is New Zealand?

- 1: class 2: map 3: market 4: record

問 3. I () Tokyo University.

- 1: graduated to 2: graduated of 3: graduated in 4: graduated from

問 4. How () does it take to get to the Civil Aviation College?

- 1: large 2: long 3: many 4: soon

問 5. () Fabio will succeed or not in the examination is doubtful.

- 1: If 2: Neither 3: Why 4: Whether

問 6. Kazuo felt a pain in the chest () the interview.

- 1: of 2: beside 3: during 4: without

問 7. This is the house () Laurie lives in.

- 1: which 2: what 3: who 4: whom

問 8. () could understand what Dong was saying.

- 1: No 2: Not 3: Nobody 4: Nothing

問 9. He arrived at the agreed time and () work pretty quickly.

- 1: ran after 2: looked down on 3: got on with 4: came down with

問 10. No matter how () one may be for money, there is nothing we can do to allow a student to take out loans or grants.

- 1: desperate 2: prevalent 3: impossible 4: considerate

II 次の各文章の () に入る最も適当な語句を、1～4 から選び記号で答えよ。 (1 問 3 点)

Any time an astronaut gets out of a vehicle while in space, it is called a spacewalk. A spacewalk is also called an EVA. EVA stands (問 1) extravehicular activity.

The first person to go on a spacewalk was Alexei Leonov. He was from Russia. The first spacewalk was on March 18, 1965. It was 10 minutes long.

The first American to go on a spacewalk was Ed White. His spacewalk was on June 3, 1965, during the Gemini 4 mission. White's spacewalk lasted 23 minutes.

Today, astronauts go on spacewalks outside the International Space Station. Spacewalks usually last between five and eight hours, (問 2) on the job.

- (問 1) 1: against 2: for 3: on 4: still

- (問 2) 1: carrying 2: depending 3: idling 4: training

Feeling afraid when watching an acrobat on a tightrope conveys the essence of emotional empathy, allowing us to share someone else's experience. It serves as a critical response in parental caregiving and group living.

(問 3) types of empathy also help us adapt to social demands. Cognitive empathy—perspective taking—lets us contemplate another person's feelings. Empathetic concern, or compassion, provides the motivation to help (問 4) another's suffering.

Downsides of empathy result from the recognition that these feelings and thoughts (問 5) to cement relationships within families and close-knit groups—not to help address perceived threats and long-standing rivalries with outsiders.

(問 3) 1: Other 2: Another 3: Others 4: The others

(問 4) 1: alleviate 2: inflict 3: produce 4: cause

(問 5) 1: articulated 2: encouraged 3: evolved 4: involved

Koalas are officially listed as at risk of disappearing in New South Wales, Australia. Now, the state's government has a \$34 million plan to protect the (問 6) animals.

Koalas have large, hairy ears. They have especially sharp claws, which help them climb trees. They are marsupials, meaning they carry their babies in an opening of skin on the mother's stomach. The animals are (問 7) to Australia, and are described in many Aboriginal stories of creation.

(問 6) 1: love 2: lover 3: loving 4: beloved

(問 7) 1: belong 2: located 3: native 4: unable

A group of researchers from a university in Canada recently published a study that says (問8) bursts of high-intensity exercise are good for you.

In fact, this kind of exercise is just as good as spending up to an hour riding a bike or running steadily.

The research team followed 27 men who were not very active for 12 weeks. They divided the men into three groups. One group did (問8), intense workouts on a bicycle three times a week. Another group rode a bicycle for about 50 minutes, three times a week. A third group did nothing.

The researchers found something they did not expect. The group that exercised for only 10 minutes each session was just as healthy after 12 weeks as the group that exercised for 50 minutes each session.

That is because of the way the researchers organized the workouts.

Each group started with a two-minute warm-up and finished with a three-minute cool-down. But in-between, the high-intensity group sprinted for 20 seconds, followed by a two-minute recovery period. They did three sprints for a total of 10 minutes of exercise. This kind of exercise is known as (問9) training.

The lead author of the study says (問9) training is both time efficient and (問10).

- | | | | | |
|-------|---------------|----------------|---------------|--------------|
| (問8) | 1: shorten | 2: shortly | 3: short | 4: shortest |
| (問9) | 1: functional | 2: interval | 3: one-to-one | 4: personnel |
| (問10) | 1: effect | 2: effectively | 3: effects | 4: effective |

III 次の文章を読んで、以下の設問に答えよ。

(30 点)

Charging passengers to sit together could hinder safe and rapid evacuations⁽¹⁾, according to a new report produced by the Royal Aeronautical Society Flight Operations Group (FOG).

The report, entitled *Emergency Evacuation of Commercial Passenger Aeroplanes*, emphasises the importance of family members being seated together in an emergency.

It lists "Passenger seat allocation" as one its 17 recommendations to improve aircraft evacuations: "Operators should not charge for family members to sit together. This is especially important when adults and their children need to be seated near to each other if an emergency situation occurs, such an evacuation, decompression or air turbulence, when the assistance and supervision of an adult is likely to be of paramount importance."⁽²⁾

The report goes on to say: "The UK Civil Aviation Authority decided that the seating of family groups should be such that family members are not seated remotely from each other, since group members who are separated might seek each other out in an emergency evacuation, which might have a serious impact on passenger flow to emergency exits."

"Children accompanied by adult(s) should ideally be seated in the same seat row as the adult. In twin-aisle aeroplanes, children and accompanying adults should not be separated by more than one aisle. When this is not possible, then children should not be seated more than one seat row forward or aft from accompanying adults."

Airlines such as Ryanair have come under fire in the past for randomly assigning groups of travellers seats far apart if they choose not to pay to reserve their seats.

"All customers can choose to purchase a reserved seat or take a free randomly allocated seat while our family seating policy requires families (with children under 12) to sit together, with one adult taking a reserved seat for just £4, and the children given free of charge reserved seats," a Ryanair spokesperson told *The Independent*.

"Like all EU airlines, we comply fully with all EU safety regulations as demonstrated by our 33-year industry leading safety record."

In the event of an emergency, passenger safety may also be compromised by travellers who are seated apart trying to reach each other from opposite ends of the cabin.

Air Commodore (Rtd) Dai Whittingham, a member of the Flight Operations Group who contributed to the paper, told *The Independent* that regulators were looking at this issue.

"Normal human behaviour means you will look to your loved ones," he said. "Clearly, where there are minors involved then they need to be looked after."⁽³⁾

“The main issue is passenger behaviour. Over the years, there have been a number of initiatives and improvements in cabin design, changes to furnishings so they don't give off toxic fumes and so on and changes to processes to try and speed up evacuations.”

“The larger issue is the number of people who stop to remove cabin bags—time can be very short between a cabin being survivable and non-survivable.”

“They slow themselves down, they slow other people, they are hazards; they risk puncturing the slides and hitting people with bags.”

Another safety concern not mentioned in the report is mobile phones: “We are also now seeing people responding to life-threatening scenarios by whipping out their phones and filming it,” said Whittingham.

Other recommendations include ensuring that there are sufficient, easily identifiable cabin crew on board and that cabin baggage is placed only in areas designed to prevent movement, such as overhead bins.

The report notes that in previous catastrophic evacuation situations, “passengers seemed to be more concerned with their personal possessions rather than their own safety or the safety of fellow passengers.”(4) One recommendation was the introduction of remote locking of overhead bins for taxi, take-off, landing and in emergency situations.

問 1. 下線部(1)を日本語に訳せ。(6点)

問 2. 下線部(2)を日本語に訳せ。(12点)

問 3. 下線部(3)を日本語に訳せ。(6点)

問 4. 下線部(4)を日本語に訳せ。(6点)
