A common misconception about the field of science is that only highly trained professionals can (問3) research and data analysis. But in fact, with the right guides, citizen scientists can be an incredible asset to the scientific community.

Citizen science, though it may initially sound like a contradiction, is the collaboration of everyday citizens and trained scientists to advance scientific knowledge. Citizen scientists can help the scientific community (問4) many ways. The most common method is through data collection, but there are also opportunities for citizen scientists to (問3) data analysis or even the development of research studies.

For scientists who don't have the time or access to do research the way they want to, citizen scientists are stepping in to fill the gap. Citizen science doesn't have to involve committing large quantities of time to being part of a research team. It can be as (問5) as taking pictures over time to help scientists gauge habitat changes. That method has been used around the world, and its simplicity makes it easier for citizens to participate in the data collection.

We go to work in the morning, see our officemates, and tell them (問7) happened on the previous night; we go home in the evening, see our family, and tell them (問7) happened during the day. We love to tell stories and we love to listen to them. Narrative is everywhere: news, gossip, dreams, fantasies, reports, confessions, and so on and so forth.

(問6) 1: far away 2: free from 3: anything but 4: so far as to

(問7) 1: to 2: what 3: thing 4: which

Public speaking is an essential life skill. The study of public speaking (問8) in ancient Athens about 2,500 years ago. Public speaking is the act of performing a speech to a live audience in a well-structured manner, in order to inform, entertain, and persuade them. There are many elements of public speaking: picking an interesting topic, writing a captivating speech, asking for audience questions, and answering those queries from them. Public speaking is usually a formal, face-to-face speech to (問9) a single person or group of listeners. Citizens were each required to give speeches as part of their civic duties, which included speaking in legislative assembly and sometimes at court to defend themselves as there were no lawyers for the average Athenian. All citizens theoretically would meet in the marketplace and exchange opinions on war, economics, and politics with one another. (問10), good speaking skills were also essential for a prominent social life.

In Europe, the movement for animal rights and protection has a rich history, marked by legislative milestones, influential organizations, and cultural shifts that increasingly recognize the intrinsic value and sentience of animals.

One of the oldest animal welfare organizations in the world, the Royal Society for the Prevention of Cruelty to Animals (RSPCA), was founded in the United Kingdom in 1824. This pioneering organization was instrumental in promoting animal welfare and influenced the passing of the first animal protection law, the Cruelty to Animals Act of 1835. The UK continued to lead in legislation with the Animal Welfare Act 2006, setting a modern standard for animal care and protection⁽¹⁾.

In Germany, the legal foundation for animal rights was significantly strengthened when, in 2002, Germany became the first country to include animal protection in its constitution, stating that the government shall respect and protect the dignity of animals as fellow beings. This shift reflected decades of advocacy and growing public awareness about animal welfare.

The Netherlands has also been at the forefront of animal rights, with the Dutch Party for the Animals (Partij voor de Dieren) founded in 2002 as the first political party in the world to focus primarily on animal rights and welfare. The party's influence has been instrumental in advancing policies like the ban on fur farming, which was implemented in 2013.

In Sweden, the Animal Welfare Act of 1988 and its subsequent amendments demonstrate the country's commitment to ensuring high standards of care. Sweden's regulations are particularly noteworthy for their species-specific approach, catering to the needs of different animals from domestic pets to livestock⁽²⁾.

France made a significant legal advancement in 2015 when the Civil Code was amended to change the classification of animals from personal property to sentient beings. This change was a monumental shift in the legal status of animals and had been a key focus of animal rights advocates for years.

The European Union has also played a crucial role in unifying and elevating animal

welfare standards across member states. Notable EU directives include the 2010/63/EU on the protection of animals used for scientific purposes and the 1998 Council Directive 98/58/EC concerning the protection of animals kept for farming purposes. The EU's commitment to animal welfare is further exemplified by the European Convention for the Protection of Pet Animals, opened for signature in 1987 and implemented by many European countries.

Organizations such as Eurogroup for Animals, founded in 1980, have been pivotal in advocating for animal welfare at the EU level. They work tirelessly to ensure that animal welfare is considered in all areas of policy-making and have been influential in the introduction and enforcement of various EU directives and regulations.

Despite these advancements, the journey is far from over. Many European countries continue to face issues such as illegal animal trade, inhumane farming practices, and inadequate enforcement of existing laws. Continuous efforts by governments, organizations, and individuals are essential to address these challenges and further the cause of animal rights.

Europe's approach to animal welfare is deeply rooted in a progressive history of legislation, advocacy, and cultural change. From the early days of the RSPCA to the modern influence of political parties and EU directives, the continent has played a vital role in shaping how society views and treats animals⁽³⁾. While significant progress has been made, the ongoing commitment of all stakeholders is crucial to ensuring a humane and ethical treatment of all animals.
